

This summer...

City Council will decide the future of Edmonton's electric trolleybus system...

To enhance sustainability, minimize local environmental impacts, and maintain quality of life in over 46 core neighborhoods, please support keeping the trolley system and buying new, low floor accessible trolleybuses!

New trolleys are all about...

modernizing
our city with
21st century
technology

an alternative to
expensive oil

keeping noise
levels down

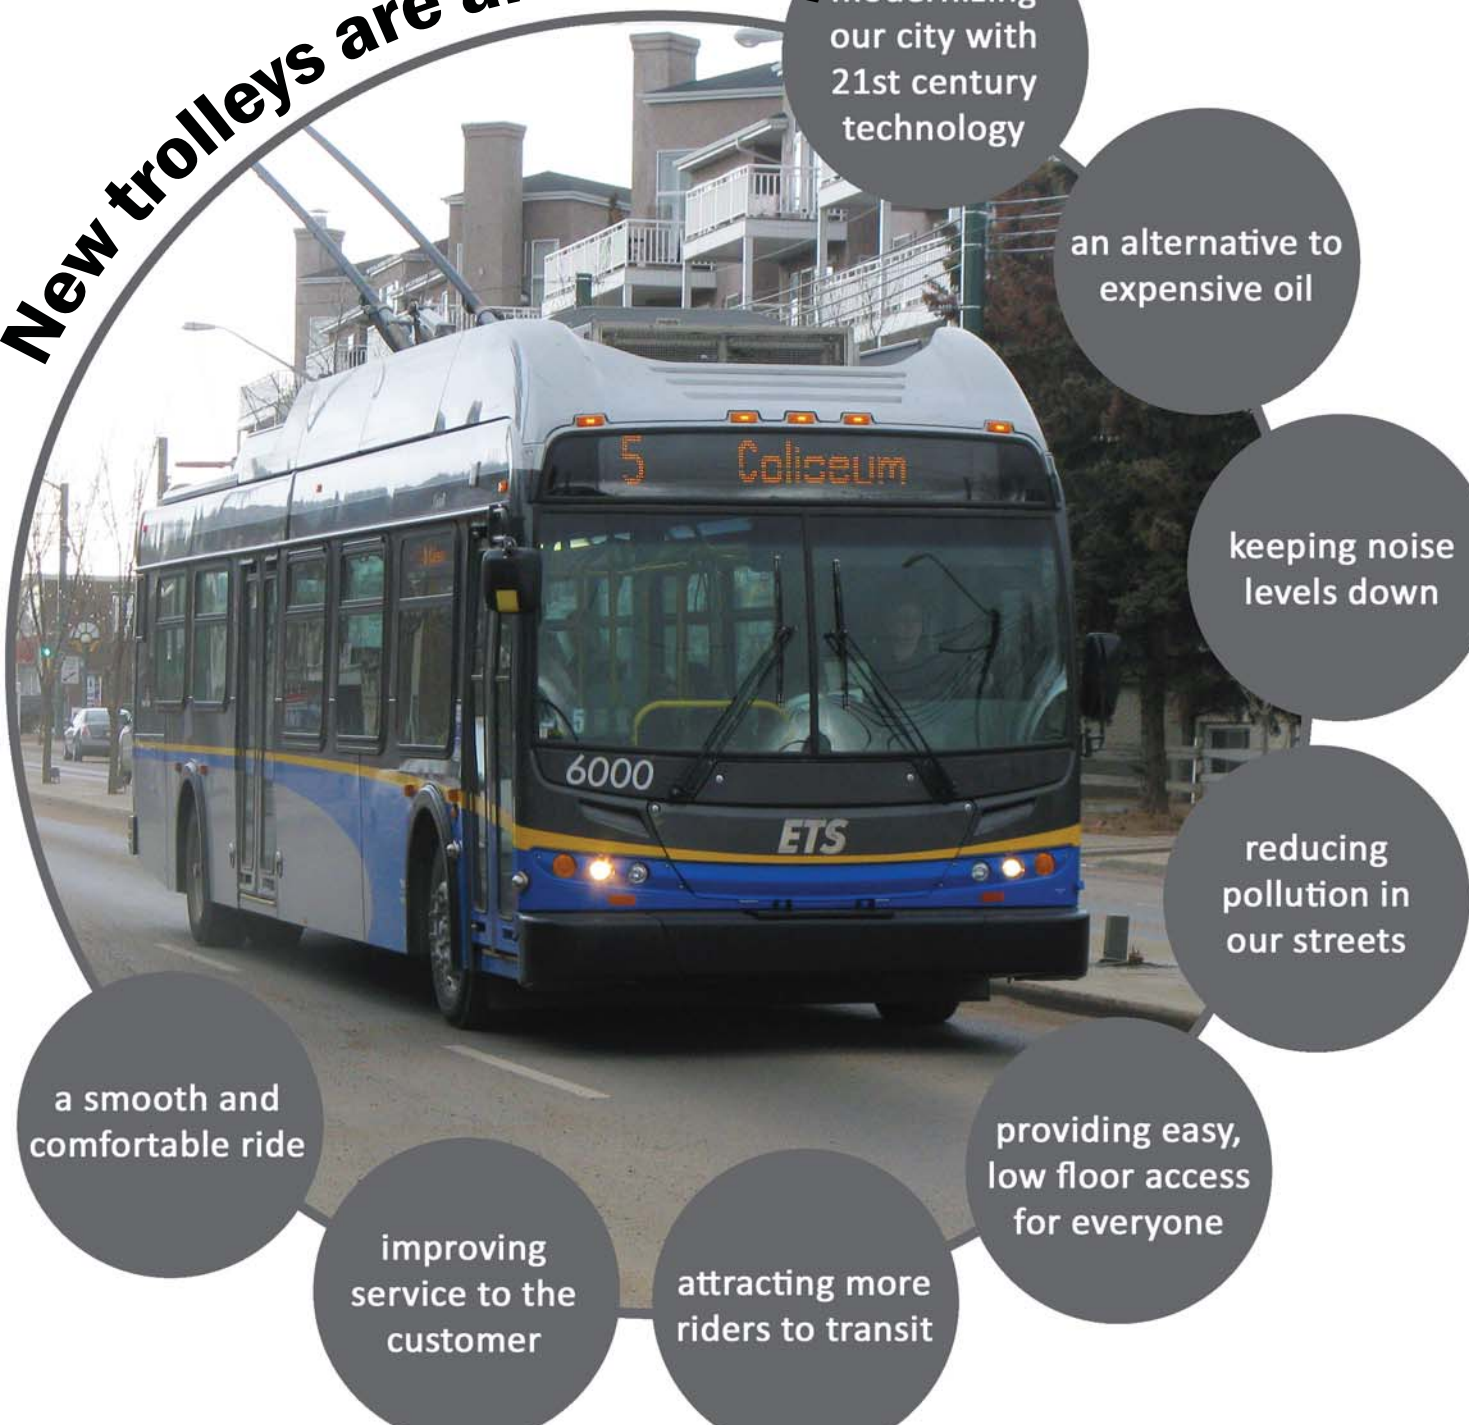

reducing
pollution in
our streets

providing easy,
low floor access
for everyone

attracting more
riders to transit

improving
service to the
customer

a smooth and
comfortable ride

With oil prices of \$300 a barrel predicted by 2013*
scrapping our investment in electric buses could prove a costly mistake!
